this is the first of three major volumes which present a comprehensive treatment of the theory of the main classes of special functions from the point  
 of view of the theory of group representations this volume deals with the properties of classical orthogonal polynomials and special functions which are  
 related to representations of groups of matrices of second order and of groups of triangular matrices of third order this material forms the basis of  
 many results concerning classical special functions such as bessel macdonald hankel whittaker hypergeometric and confluent hypergeometric functions  
 and different classes of orthogonal polynomials including those having a discrete variable many new results are given the volume is self contained since  
 an introductory section presents basic required material from algebra topology functional analysis and group theory for research mathematicians  
 physicists and engineers

central simple algebras arise naturally in many areas of mathematics they are closely connected with ring theory but are also important in representation  
 theory algebraic geometry and number theory recently surprising applications of the theory of central simple algebras have arisen in the context of  
 coding for wireless communication the exposition in the book takes advantage of this serendipity presenting an introduction to the theory of central  
 simple algebras intertwined with its applications to coding theory many results or constructions from the standard theory are presented in classical form  
 but with a focus on explicit techniques and examples often from coding theory topics covered include quaternion algebras splitting fields the skolem  
 noether theorem the brauer group crossed products cyclic algebras and algebras with a unitary involution code constructions give the opportunity for  
 many examples and explicit computations this book provides an introduction to the theory of central algebras accessible to graduate students while also

presenting topics in coding theory for wireless communication for a mathematical audience it is also suitable for coding theorists interested in learning how division algebras may be useful for coding in wireless communication
